

FS2000 – Installation IN029 Onwards

For support contact: fs2000@aes-uk.com

The FS2000 Distribution CD or Installation ZIP file

The CD/Zip contains the following:

- FS2000_setup.exe FS2000 set-up program
- Manuals FS2000 documentation in PDF format

FS2000 Directories

Apart from user model folders FS2000 uses two basic directories:

- FS2000 System Folder
- FS2000 User Folder

The FS2000 System folder would normally be located in the Window's Program Files folder. This can be a read only folder.

The FS2000 User folder can be located anywhere. The set-up default is C:\Program Files\FS2000. **The local user must have full read and write access to this folder.** This folder location is specified at set-up but not registered. It will be registered with a specific user when the user first uses FS2000.

A utility, FS_User_INI.exe can be used to create/relocate and register the FS2000 User folder. This can be used to change the location defined at set-up. This can enable different local user each to have their specific FS2000 User folders.

User Model Directories - FS2000 requires fast read and write disk access to model related data files. Therefore, for efficient operation, model folders should be located on a local hard drive and network drives are recommended to be used for only for archive purposes. **Therefore, ensure that user have full access to a local drive folder.**

What the Set-ups will do.

The FS2000_setup.exe program will:

- Install FS2000 system files in a folder of choice (C:\Program File\FS2000)
- Create a program group for the FS2000 program modules in the Windows start menu.
- Register the specified location of the FS2000 user folder (C:\Program Files\FS2000)

The FS2000 system folder it will have the following sub-folders.

System	System files for FS2000
Examples	Validation Examples
Props	Property Libraries (duplicates of those in the FS2000 folder)
Manuals	Documentation in pdf format

When a local user first uses FS2000 it will detect that the FS2000 User folder does not exist. This will then be created at the location specified during set-up.

FS2000 Documentation

FS2000 has context sensitive help documentation. Hit the F1 key to activate.

The user documentation for FS2000 is located on the CD in the Manual folder. The manuals are in PDF format.

FS2000.pdf is the printable document version of the Help file for the core module.

Documentation relating the DesNet server software is located on the CD in the DK2NetSvr folder.

Software License Control

FS2000 uses a DESKey (DK2) USB dongle system to control the use of the program. This control can be local or networked using a host machine.

This is not used by the demo version.
